

Abhin ks

MERN STACK DEVELOPER

+91-8848328249 | abhin1511203@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFILE SUMMARY

Full-stack developer focused on building scalable web applications with React, Node.js, TypeScript, and PostgreSQL/MongoDB. Experienced in backend architecture, authentication, payments, real-time communication, and production-oriented application development.

SKILLS

Programming	JavaScript (ES6+), TypeScript
Frontend	React.js, Redux Toolkit, Tailwind CSS, Shadcn UI
Backend	Node.js, Express.js, REST APIs, Nest JS
Architecture	Modular monolith, Repository Pattern, Clean Architecture, OOAD
Databases	MongoDB, PostgreSQL, Redis, Firebase
Cloud & DevOps	AWS (EC2, S3), Nginx, pm2
Integrations	Razorpay, Monaco Editor, Cloudinary
Tools	Git, GitHub, npm

PROJECTS

Veltrex (CNC Production Management Platform)

[GitHub - Backend](#) [GitHub - Frontend](#)

A multi-tenant SaaS platform for small and mid-sized CNC manufacturing shops to manage production planning, CNC programs, machine operations, maintenance, employees, and production workflows.

Tech stack: NestJS, Node.js, TypeScript, React, PostgreSQL, Prisma, Redis, SSE, Razorpay, TailwindCSS

- Architected a modular monolith backend using Clean Architecture, Repository Pattern, dependency injection, and domain-driven design principles
- Developed production planning and scheduling workflows for assigning jobs based on machine compatibility, job priority, deadlines, setup times, and machinist availability
- Implemented multi-tenancy and role-based access control for admins, supervisors, machinists, and maintenance technicians
- Built NC program management with version control and program editor for CNC production workflows
- Implemented production shift management with scheduled shift generation and job allocation using NestJS Schedule and cron jobs
- Integrated Razorpay and lifetime-purchase payments with webhook-based payment verification
- Implemented a maintenance ticket management system with ticket creation, status tracking, assignment, and workflow management

Chronova (Full-Stack E-Commerce Watch Store)

[GitHub](#)

A full-stack e-commerce platform for selling watches with user authentication, product management, shopping cart, orders, payments, offers, and an admin dashboard.

Tech stack: Node.js, Express.js, MongoDB, Mongoose, EJS, JavaScript, Razorpay, Cloudinary, Passport.js, Nodemailer

- Built complete user and admin workflows for browsing products, managing carts, wishlists, placing orders, and handling returns

- Implemented JWT based authentication, OTP verification, Google OAuth, and secure route protection
- Integrated Razorpay payments with payment verification and retry handling
- Implemented product search, filtering, wishlist, coupons, offers, and referral-based discounts
- Built admin features for product, category, user, order, coupon, and offer management
- Implemented MongoDB transactions to prevent stock inconsistencies during concurrent order operations

MINI PROJECTS

TaskVault — Task Management API

[GitHub](#)

Built a CRUD task management API with JWT authentication, role-based authorization, clean architecture, and asynchronous dual-database synchronization using BullMQ.

Tech stack: Node.js, Express, TypeScript, MongoDB, PostgreSQL, BullMQ

DevScribe — Blog Application

[GitHub](#)

Built a blog application with user authentication and CRUD functionality while gaining hands-on experience with Firebase Authentication and Cloud Firestore.

Tech stack: React, Firebase Authentication, Cloud Firestore

PCForge — E-Commerce Platform

[GitHub](#)

Built a simulated e-commerce platform to learn global state management with Redux, including product browsing, cart management, and Cloudinary-based image handling.

Tech stack: React, Redux Toolkit, Node.js, Express, MongoDB, Cloudinary

EDUCATION

Professional Training – Full Stack Development (MERN Stack), Brototype

Jan 2025 – Apr 2026

- Completed intensive full-stack development training with hands-on experience building and deploying web applications
- Developed full-stack applications using modern frontend and backend technologies with a focus on scalable and maintainable code
- Built applications involving authentication, role-based access, payment integration, real-time communication, and third-party APIs
- Practiced software design principles, data structures, algorithms, database management, and backend architecture
- Gained practical experience with Git, cloud deployment, debugging, and collaborative software development
